Ransomware Basics course

Executive summary

September was a busy but well-controlled month. All 32 security incidents came from Microsoft 365 sign-ins, not your computers, so email accounts remain the main target. The most serious, a suspicious sign-in from Colombia, was resolved on the day. Devices scored 84% overall, but third-party apps are only 50% up to date and training completion is low.

On track

Wins this month

- Suspicious Colombian sign-in caught and resolved the same day
- New Meridian laptop deployed with full security tools
- Azure server removal approved to cut monthly costs

Watch

Keeping an eye on

- Third-party apps out of date on 18 computers
- One PC raised 109 of 141 monitoring alerts
- Overseas sign-ins on shared mailboxes

Action needed

Your decision needed

- Only 12 of 67 staff finished security training
- One computer has no antivirus detected
- Confirm two external sign-in alerts

Scorecard

Area	September result	Status
24/7 security monitoring	32 incidents: 14 resolved, 9 expected activity, 9 open	Watch

SECTION 1

24/7 Security Monitoring

Our Security Operations Centre (SOC) watches your Microsoft 365 accounts and computers around the clock, and investigates anything unusual.

Incidents by week

Source: RocketCyber

The spike in the week of 8 September was driven by the Colombian sign-in investigation.

What triggered them

Unusual sign-in location **19 (59%)**

Microsoft risk detection **11 (34%)**

Failed multi-factor sign-in **2 (6%)**

100% of incidents came from Microsoft 365. None came from your computers. Monitoring covers 261 accounts and 34 computers.

Notable incidents

Date	What happened	Status
09/09	Sign-in to info@mhterrace.com.au from Bogotá, Colombia, through an anonymising network. SOC phoned DRG and investigated 121 related events.	Resolved
17/09	Sign-in to shaun@1834hotels.com.au from Japan. SOC phoned DRG to verify.	Resolved
17/09	Two failed multi-factor attempts on a guest account from nrl.com.au.	Open
23/09	Sign-ins to DRG's admin account and a BitTitan migration account from the US and the Netherlands.	Open: DRG verifying
24/09	Sign-in for an external user from kyroncapital.com from Italy. SOC phoned DRG.	Open: please confirm
Recurring	New Zealand sign-ins to reservations@ascotiaoffqueen.co.nz and German sign-ins for jessica@. Reviewed and marked as expected.	Expected

What this means for you

Attackers are targeting your email accounts, not your computers. Shared mailboxes such as reservations@ and info@ are the most exposed because several people use them. Blocking sign-ins from countries you do not operate in and enforcing multi-factor sign-in on every account would stop most of these alerts before they start.

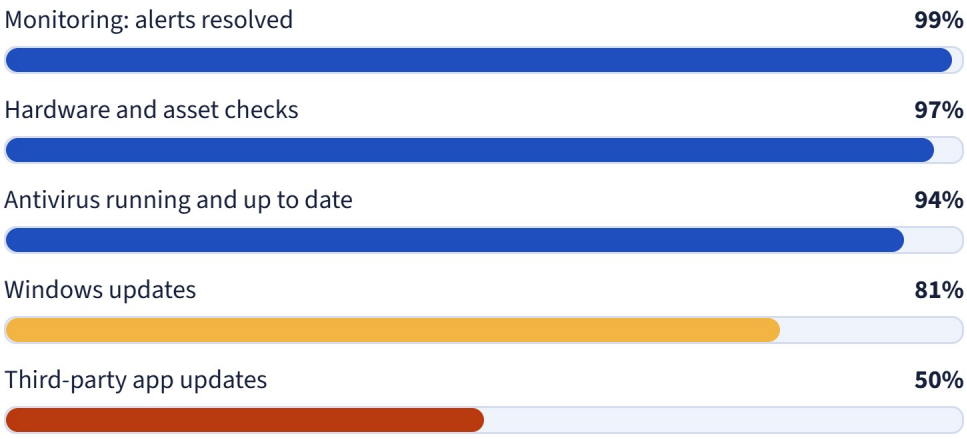

Device Health and Protection

How the 38 computers we manage for you measure up on updates, antivirus and hardware.

HEALTH SCORE

84%

36 laptops, 2 desktops
1 new device this month

Windows updates

Status	PCs
Fully patched	30
Approved, installing	4
Restart required	2
Install error	1

Third-party apps

Status	PCs
Up to date	19
Out of date	18
Not managed	1

Antivirus

Status	PCs
Protected	36
Out of date	1
Not detected	1

Monitoring alerts

Source: Datto RMM

141 alerts raised, **140** resolved, **0** critical. **4** computers have less than 15% free disk space.

Computer	Alerts	What we see	Recommended fix
Proactive maintenance			
DESKTOP-U9EH937	109	118 GB drive running 94% to 98% full	Larger drive or replacement
HAADLMFLTSAM02	15	Drive 95% full, memory near 90%	Clean-up and hardware review
LGmanager	8	Drive 95% full	Data clean-up with the user
1834-LT-RM	7	Monitoring alerts raised	DRG to review
1834Kazim	1	Drive 89% full, updates outstanding	Patch remediation

What this means for you

Your computers are in good shape and all run supported Windows. Two gaps matter: half have out-of-date third-party apps, which attackers target, and one has no antivirus detected. DRG will close both. DESKTOP-U9EH937 caused 77% of alerts and needs a hardware fix.

Service Desk

How we supported your team this month.

TICKETS RAISED	TICKETS CLOSED	STAFF REQUESTS	ALERT TICKETS
29	**28**	**4**	**24**
In September	1 still open	All completed	Raised automatically

Requests from your team

Source: Autotask PSA

Raised	Request	Outcome
02/09	Out-of-office auto-reply for the GM mailbox at Chateau Yering	Completed same day
14/09	Azure cloud cost review: removal of a virtual server to reduce monthly charges	Approved, completed 25/09
15/09	New laptop for the Meridian hotel, with monitoring, endpoint protection and Microsoft 365; old McAfee removed	Delivered 21/09
21/09	30-day mailbox audit report for the GM mailbox at Chateau Yering	Report sent 27/09

From alert to fix

141
Alerts raised by 24/7 device monitoring

24
Escalated to service desk tickets

1
Still open at month end

Automated task	Schedule	Purpose
Disk clean-up	Weekly, every device	Clears temporary files to free space and keep updates installing
SOC agent audit	On deployment	Confirms 24/7 security monitoring is installed and reporting

What this means for you

Most problems are found and fixed by monitoring before your team notices. Every request your staff raised was completed, most within a week. The one open ticket is a low disk space alert on LGmanager, which we are working through with the user.

People and Next Steps

Security awareness training

Source: BullPhish ID

STAFF ENROLLED	FULLY COMPLETE	NOT STARTED	INVITE UNOPENED
67	**10**	**55**	**46**
Across all properties	All assigned courses	0% completion	Ransomware Basics

Ransomware Basics (assigned 06/09) — **12 of 67 completed (18%)**

Social Engineering refresher (assigned 18/09) — **6 of 36 completed (17%)**

Names of everyone with training outstanding are listed on page 6. October's phishing simulation started on 1 October, with results in next month's report.

Our recommendations

Priority	Recommendation	Why it matters	Cost
Action needed	Set a training deadline and have property managers follow up	Staff are your most targeted defence layer	Included
Action needed	Restore antivirus on the unprotected computer	Every device needs protection	Included
Action needed	Confirm the external Italy sign-in and the guest account alerts	Closes 3 of the 9 open incidents	Included
Watch	Block sign-ins from unused countries and enforce multi-factor sign-in on shared mailboxes	Stops most of September's alerts at the source	[QUOTE TO FOLLOW]

Next month focus

- Close all nine open security incidents and track training weekly by property.
- Lift Windows patching above 95% and third-party apps above 90%.
- Add dark web monitoring, email protection and backup results to this report.
